

What is the Hybritherm SOL_{series}?

The Sol r2 & Sol r3 are single gas-burning, boiler-based units that intelligently manage multiple heating applications. They are easy to install and can heat space and domestic hot water, resulting in better fuel efficiency.

- Air Distribution
- Water Distribution
- Radiant Heat
- Gas

Heat 3

How Does The SOL_{series} Work?

Heat 1 Heat 1 is designed specifically to manage your hot water supply via an indirect hot water storage tank (shown left).
 Storage Tank

Heat 2 This high to medium temperature emitter supplies primary space heat to the home using a fan coil (shown left), radiators or in-floor heating.
 Fan Coil Radiator In Joist

Heat 3 Only available in the Sol r3, this circuit manages medium and low temperature heat emitters for secondary heating, such as in-floor heating (shown below left), fan coil and radiators.
